

ORIGINAL MOCK EXAMS

Four independent sets | Core 25 + Reading 35 + Listening 40 + Writing 50 + Speaking 12 = 162 minutes per mock.

These are additional assessment resources. Do not add a full mock to a 60-minute weekly session. To divide a mock, use A: Core + Reading (60 min), B: Writing (50 min) + review (10 min), C: Listening + Speaking (52 min) + review (8 min). Keep the same MOCK ID across all three blocks.

Mock 4 uses more qualified opinions, less obvious lexical distinctions and more demanding evaluation. Early parts still retain the accessible demands of the official General architecture. No raw percentage is converted into an official score.

Listening: 17 tasks, 20 recordings, 25 answer decisions; play each recording no more than twice. A helper/TTS must keep transcripts hidden. Speaking uses photo briefs, so visual processing is an adaptation. Use your own timer.

The first sentence is fixed. Put A-E in order to make one coherent text.

First sentence: A baker decided to test a new bread recipe before selling it.

A. For this first trial, she made only one small loaf.

B. To correct the dense centre, she allowed the next batch more time to rise.

C. The longer rise produced a much lighter texture in this second batch.

D. When that loaf had cooled, she cut it open and found a dense centre.

E. Satisfied with that improvement, she added the bread to the weekend menu.

MOCK01-READ-P21-Q01 Position 2: ____ | MOCK01-READ-P21-Q02 Position 3: ____ | MOCK01-READ-P21-Q03 Position 4: ____ |

MOCK01-READ-P22 | ORDERING | 5 min

The first sentence is fixed. Put A-E in order to make one coherent text.

First sentence: A passenger handed a forgotten umbrella to the station attendant.

A. Later that day, the owner used the register to identify the umbrella by its description.

B. After noting that location, she attached a numbered label to the handle.

C. The attendant first recorded the platform on which the passenger had found it.

D. Once the description had been checked against the labelled item, the attendant returned it.

E. The number on this label was then entered into the lost-property register.

MOCK01-READ-P3 | ART IN PUBLIC PLACES | 7 min

Match each statement to the person whose opinion supports it. A person may be used more than once.

A | Nora

I enjoy unexpected artworks in streets, especially when they make me notice a place I usually pass without looking. I do not need an explanation beside every piece. Sometimes leaving room for different interpretations is part of the pleasure. I would be disappointed if every installation had to be instantly popular before anyone would fund it.

B | Eli

A work can be interesting and still be in the wrong location. A large sculpture near a narrow crossing may obstruct people who are simply trying to get somewhere. I would judge a proposal partly by how the space is used throughout the day. Artistic value does not remove the responsibility to keep a public route usable.

C | Mina

I like knowing who made a piece and why. A short explanation or a talk can help me engage with something that initially seems confusing. That does not mean telling everyone what to think. It gives people an entry point, particularly if they have never visited a gallery and feel that art is meant for somebody else.

D | Toby

Temporary installations appeal to me because a place can keep changing. I may dislike one piece, but I know it will not define the square for decades. A changing programme could also give less established artists a chance. Maintenance still matters, though: temporary should not mean that a damaged installation is left unattended.

MOCK01-READ-P3-Q01 Believes practical movement through a space must influence the choice. _____

MOCK01-READ-P3-Q02 Welcomes work that may not win immediate approval. _____

MOCK01-READ-P3-Q03 Values opportunities for artists who are not yet well known. _____

MOCK01-READ-P3-Q04 Thinks some context can help hesitant viewers participate. _____

MOCK01-READ-P3-Q05 Enjoys finding personal meaning without a supplied explanation. _____

MOCK01-READ-P3-Q06 Does not believe a short display period removes the need for care. _____

MOCK01-READ-P3-Q07 Would assess how a location functions at different times. _____

MOCK01-READ-P4 | THE LONG JOURNEY OF THE WEATHER FORECAST | 14 min

Match seven paragraphs to seven of the eight headings. Use each selected heading once; one is extra.

A. Several outcomes can be more informative than one

B. Improvement depends on looking backwards

C. Observations before instruments

D. Calculation turns patterns into projections

E. Why one forecasting method must replace all others

F. Users need consequences as well as numbers

G. Communication makes a wider picture possible

H. Standardisation improves the raw material

1. People have always watched the sky for signs of approaching weather. Farmers, sailors and travellers built up detailed knowledge of local patterns long before forecasts became a public service. Such knowledge could be remarkably useful within a familiar landscape, but it was difficult to transfer. A cloud formation that preceded rain near one mountain range might mean something different elsewhere. Nor could an observer on the coast know that a storm was developing far beyond the horizon. The central limitation was therefore not simply a lack of careful observation. It was the inability to compare observations from distant places quickly enough for them to describe the same developing situation.

2. The spread of rapid long-distance communication changed what forecasters could attempt. Reports collected at roughly the same time could be placed on a map, revealing patterns that no single observer could see. The weather was no longer merely a sequence of local surprises; it became a moving system that could be followed across a region. This did not instantly make predictions reliable. Stations used different instruments and reporting practices, and gaps remained between them. Nevertheless, assembling simultaneous information created the basis for a new kind of inference. A disturbance observed to the west could become a warning for places that had not yet experienced any change.

3. Before observations could be combined confidently, people had to agree on how to make them. Temperature readings taken in direct sunlight cannot be compared fairly with readings from a shaded enclosure. The height and position of instruments matter, as does the time at which a measurement is recorded. Standard procedures made differences between stations more meaningful by reducing differences caused by the act of measuring. This work lacked the drama of predicting a major storm, but it was essential. A sophisticated calculation cannot recover the true state of the atmosphere from inconsistent data merely because the calculation itself is precise.

4. Mathematical models introduced another change. Instead of relying entirely on resemblance to previous weather situations, forecasters could estimate how the present atmosphere would evolve according to physical relationships. Computers made increasingly detailed calculations practical. Yet a model remained a representation, with the world divided into manageable sections and some processes simplified. Making those sections smaller required more computing power and better observations. Improvements were therefore gradual rather than magical. A colourful map produced by a computer might appear more authoritative than an older hand-drawn chart, but both depended on assumptions and on the

quality of the information available when they were made.

5. Small differences in the estimated starting conditions can lead to different later outcomes. One way to explore that uncertainty is to run multiple related forecasts rather than treating a single result as inevitable. If the runs broadly agree, confidence may be higher; if they diverge, the range itself becomes useful information. This approach can frustrate people who expect one definite answer. However, a probability is not necessarily an admission that forecasting has failed. It can be a more honest description of the evidence than a simple claim that rain will, or will not, occur at a particular location tomorrow afternoon.

6. A forecast acquires practical value when someone can use it to decide what to do. The same likelihood of heavy rain may matter differently to a commuter, an outdoor-event organiser and a farmer harvesting a crop. Communicating only the meteorological information leaves each user to translate it into possible consequences. Clear warnings help by explaining the relevant impact without pretending that every situation is identical. They also need to distinguish confidence from severity: an event can be unlikely but serious enough to justify preparation. Choosing understandable language is therefore part of forecasting, rather than a decorative stage added after the scientific work has finished.

7. Forecasting organisations compare predictions with what subsequently happened. This examination can reveal a persistent regional bias or a tendency to underestimate certain conditions. It is not enough to remember the spectacular successes and failures, because memorable events form an unrepresentative sample. Systematic records show whether a change actually improves performance across many cases. The modern forecast is consequently both a statement about the future and the product of repeated evaluation of the past. Its history is not a straight journey from ignorance to certainty, but a continuing effort to measure more consistently, calculate more usefully and describe the remaining uncertainty more clearly.

MOCK02-READ-P3 | CHOOSING AN ADULT COURSE | 7 min

Match each statement to the person whose opinion supports it. A person may be used more than once.

A | Leila

I compare the weekly commitment before looking at the certificate. A course may be excellent, but if its schedule clashes with work I will not finish it. Recorded lessons help, although I still want occasional live sessions where I can ask questions. Flexibility matters because my shifts change, not because I want to study entirely alone.

B | Owen

I want a course that requires me to produce something and receive feedback on it. Watching polished demonstrations can give me an illusion of understanding. I only discover the gaps when I try the task myself. The tutor does not need to be famous; they need to explain what to improve in work I have actually attempted.

C | Ruth

I am studying for a role with a formal entry requirement, so I check whether the qualification is recognised before paying. I would enjoy an informal workshop, but it would not serve this particular purpose. The most attractive course description is of little use if the employer will not accept the resulting certificate.

D | Samir

My previous course was so closely connected to my job that it felt like more work after work. This time I want to explore something unfamiliar without turning it into a career plan. I still expect good teaching and a clear structure. I simply do not need every hour of leisure to produce a professional advantage.

MOCK02-READ-P3-Q01 Needs evidence that the final certificate will meet an external requirement. _____

MOCK02-READ-P3-Q02 Wants an activity that creates distance from professional life. _____

MOCK02-READ-P3-Q03 Values feedback on personal attempts more than impressive demonstrations. _____

MOCK02-READ-P3-Q04 Requires flexibility but still wants some real-time interaction. _____

MOCK02-READ-P3-Q05 Rejects the idea that leisure learning must improve employment prospects. _____

MOCK02-READ-P3-Q06 Thinks performing a task reveals what has not been understood. _____

MOCK02-READ-P3-Q07 Considers practical attendance constraints before the award offered. _____

MOCK02-READ-P4 | THE ROOM THAT TEACHES YOU TO LISTEN | 14 min

Match seven paragraphs to seven of the eight headings. Use each selected heading once; one is extra.

A. Materials change what remains audible

B. Flexibility comes with a practical cost

C. Reflections arrive after the original sound

D. A surprising first impression

E. Good design supports the intended activity

F. A campaign to close large concert venues

G. The audience is part of the room

H. A familiar seat can conceal a local problem

1. On entering a small rehearsal room, a visiting pianist played a familiar sequence and stopped almost immediately. The notes seemed unusually dry. In the concert hall next door, the same passage had sounded rich and continuous. Nothing had changed in the piano or the player's technique; the room was altering what reached the listener. This everyday experience introduces a difficult design problem. A space suitable for clear speech may not provide the atmosphere musicians want, while a room that flatters a solo instrument may turn a busy conversation into a confusing wash of sound. There is no single acoustic quality that every activity requires.

2. Sound reaches an audience by more than one route. Some travels directly from its source, while some encounters walls, ceilings or other surfaces first. These reflected sounds arrive later. Depending on their timing and strength, they can enrich the impression of a performance or interfere with its clarity. A listener does not usually identify each reflection separately. Instead, the combined result may feel warm, distant, harsh or muddled. Describing those impressions is easier than connecting them to a particular feature of the room. The designer must work between subjective experience and measurable behaviour, without assuming that either one can replace the other.

3. Soft furnishings tend to absorb more sound than hard, smooth surfaces, but simply adding as much absorption as possible is not a universal solution. A room can become so acoustically dry that performers struggle to hear how their sound develops. Different materials also affect different parts of the sound spectrum, so a treatment that reduces one problem may leave another untouched. This is why a few attractive panels cannot be assumed to solve every acoustic difficulty. Their position, depth and relationship to the rest of the room matter. Choosing them only for their appearance treats a functional intervention as though it were ordinary decoration.

4. An empty hall may behave differently from the same hall during a performance. Clothing and bodies absorb sound, and the distribution of people changes the environment the designer is trying to control. Testing only before an audience arrives can therefore give an incomplete impression. Rehearsals and opening events often reveal adjustments that need to be made. This does not necessarily show that the original calculations were careless. It shows that a building is used by people rather than existing as a fixed, empty shape. The interaction between the intended activity and the occupied space is part of the design problem itself.

5. Some venues use movable curtains, adjustable panels or other features to suit different events. In principle, this allows one room to support both spoken presentations and musical performances. In practice, someone must know which arrangement to select and have time to make the change. A flexible system that is difficult to operate may remain in the same position for every booking. Its theoretical range then offers little benefit. The choice between a specialised room and an adaptable one should therefore include staffing and everyday routines, rather than comparing only the possibilities shown on an architect's drawing or in a supplier's demonstration.

6. Acoustic quality is not necessarily identical throughout a hall. A seat beneath a balcony may receive a different balance of direct and reflected sound from one near the centre. People who always sit in the same place can form quite different opinions of the same venue without either being mistaken. During evaluation, listening from several positions is more informative than relying on one favourable location. It can also explain why a performer feels that a room sounds excellent while some audience members disagree. The stage and the back row are different listening environments, even though they belong to one building.

7. The rehearsal room that initially disappointed the pianist had a useful purpose. Its limited reverberation made uneven playing easier to notice, so it supported precise practice. The concert hall served another purpose by allowing musical phrases to blend more generously. Judging one as simply better would miss the distinction. A successful acoustic design begins by asking what people need to hear and do in the space. Technical measurements help answer that question, but they cannot choose the purpose on the users' behalf. The best room is not the one with the most impressive description; it is the one that supports the work or experience for which it is used.

First sentence: A tenant noticed a persistent drip beneath the kitchen sink.

A. The photograph enabled the landlord to explain the fault to a plumber before the visit.

B. She placed a dry cloth below the pipes to find where the water was landing.

C. A wet patch soon appeared directly beneath one joint.

D. Knowing which joint was affected, the plumber arrived with the appropriate replacement.

E. Using the position of that patch, she photographed the leaking joint for the landlord.

MOCK03-READ-P3 | WORKING WHILE TRAVELLING | 7 min

Match each statement to the person whose opinion supports it. A person may be used more than once.

A | Ada

I sometimes work on trains, but only on tasks that can be interrupted. A delay or a lost connection should not jeopardise an important deadline. I prepare documents in advance so I do not depend on internet access. The journey can be productive, provided I do not treat it as a guaranteed substitute for a properly equipped workplace.

B | Ben

I protect travel time as a break between work and home. It is tempting to answer a few messages, but that quickly turns into a continuing conversation. I am not opposed to remote work. I just need a boundary somewhere, and the journey gives me a useful one that I would otherwise struggle to maintain.

C | Cleo

I can edit a draft while travelling, but discussing confidential material in a crowded carriage is another matter. Headphones do not stop other passengers hearing what I say. Some people seem to assume that being away from the office changes the responsibility to protect information. I would rather postpone a call than ignore who might be listening.

D | Dylan

Travelling to a different setting sometimes helps me solve a problem I have been staring at for days. I do not necessarily open a laptop; looking out of the window can be enough to interrupt an unproductive pattern. I would not schedule every journey around this benefit, because it is unpredictable, but I value the occasional shift in perspective.

MOCK03-READ-P3-Q01 Sees a journey as a useful boundary between parts of the day. _____

MOCK03-READ-P3-Q02 Avoids relying on a connection that may fail. _____

MOCK03-READ-P3-Q03 Believes location does not remove obligations concerning sensitive information. _____

MOCK03-READ-P3-Q04 Values a benefit that cannot reliably be planned. _____

MOCK03-READ-P3-Q05 Chooses tasks whose interruption will not cause serious difficulty. _____

MOCK03-READ-P3-Q06 Thinks doing less visible work may sometimes help thinking. _____

MOCK03-READ-P3-Q07 Would delay a conversation to protect its contents. _____

MOCK03-READ-P4 | A TOWN CHOOSES WHAT TO PUT ON ITS EMPTY SHOPFRONTS | 14 min

Match seven paragraphs to seven of the eight headings. Use each selected heading once; one is extra.

- | | |
|--|--|
| A. One proposal offers a quick visual solution | B. A second option invites local authorship |
| C. An unexpected result shifts the emphasis | D. Why every empty shop should become a museum |
| E. A temporary project needs an ending | F. Commercial use creates competing incentives |
| G. A limited trial separates prediction from observation | H. The problem extends beyond appearance |

1. The town's vacant shops had become a familiar subject in local conversation. Some residents complained about their appearance, while traders worried that stretches of dark windows discouraged people from walking further along the street. The council had little control over the speed at which private properties would be let. It could, however, negotiate temporary use of their windows. The proposal sounded modest, but it raised a question about what the town wanted those windows to communicate. Covering the glass would conceal vacancy; using it as a public surface could acknowledge the problem while giving people a reason to pause and look.

2. The first option was to place large photographs of imaginary shop interiors behind the glass. Supporters argued that the street would immediately appear more active. The images could be produced consistently and installed without requiring much access to the buildings. Critics objected that a picture of a busy cafe might look convincing from a distance but disappointing close up. There was also a risk that visitors would mistake an image for an actual business. The disagreement concerned more than artistic taste. It asked whether improving the appearance of activity was an appropriate response to the absence of activity itself.

3. Another proposal would allow schools, clubs and individual residents to display work. This offered variety and could make the windows feel connected to the people who used the street. However, an invitation to participate would not guarantee a balanced result. Groups with confident organisers might occupy most of the available space, while less established voices remained absent. The council would need a selection process that was understandable without turning a temporary display into a complicated competition. It would also have to decide who maintained the work, how long each contribution stayed and what happened if a property became available to a tenant suddenly.

4. A third suggestion was to rent the windows for advertisements and use the income to maintain the street. This had an obvious financial advantage. It also introduced a tension: the most profitable advertisers might have little connection with the town, and a sequence of large advertisements could make the area feel less distinctive. Local traders asked whether they would receive favourable rates, but that would reduce the money raised. The option therefore could not be judged solely by its expected income. The council had to consider what kind of public environment the arrangement would produce and whose interests the available space should serve.

5. Rather than committing every window to one approach, the council obtained permission to test different treatments on a short section of the street. It recorded where people stopped and asked nearby traders whether visitors seemed confused about which premises were open. The trial did not prove that a display could restore the local economy, and the organisers avoided making that claim. Its narrower purpose was to identify obvious problems before extending the scheme. Observing how people actually responded was more useful than counting expressions of support at a meeting, where participants had been reacting to descriptions rather than completed installations.

6. The most frequently discussed display contained a sequence of photographs showing the same corner at different dates. People pointed out changes and shared memories with companions. Unlike the imaginary interiors, it did not suggest that a closed business was operating. Unlike a conventional advertisement, it rewarded close attention without asking viewers to buy anything. Its popularity did not mean every window should become a historical display. It suggested that the strongest installations gave people something to do mentally or socially. That finding helped the organisers refine their selection criteria around engagement rather than around one particular visual style.

7. The final scheme used changing local displays under short agreements that allowed owners to reclaim windows when tenants arrived. Each installation included a contact and removal date, so abandoned work would not become another sign of neglect. The council also published the limited purpose of the project: to improve the experience of walking along the street while longer-term economic changes took place. This distinction mattered. A temporary cultural use could make vacancy less discouraging, but it could not substitute for viable businesses, accessible premises or realistic rents. Recognising that boundary made the project more credible, not less worthwhile.

MOCK04-READ-P3 | USING ONLINE REVIEWS | 7 min

Match each statement to the person whose opinion supports it. A person may be used more than once.

A | Iona

I find a detailed negative review more useful than a string of unexplained stars. It may describe a problem that would not bother me at all, or reveal something crucial to my needs. I do not simply adopt the verdict; I use the circumstances behind it to decide whether the same experience would matter to me.

B | Jon

The average score attracts attention, but I check when the reviews were written. A change of management can make old praise or criticism less relevant. I also look for repeated details across recent accounts. One vivid story may be accurate without being typical, and its emotional force should not determine the whole decision.

C | Kira

I notice how a business responds when something has gone wrong. A specific explanation and a practical remedy can tell me more than a flawless rating. I would not expect every complaint to be accepted without question, but a response that dismisses the customer without addressing the issue makes me cautious.

D | Luis

Reviews can help me form questions, but I am wary of how the platform decides which ones I see first. The most prominent comments may be the most dramatic rather than the most representative. Reading several pages helps, although it does not eliminate the possibility that people with ordinary experiences were less likely to write anything.

MOCK04-READ-P3-Q01 Uses the circumstances of a complaint rather than simply adopting its verdict. _____

MOCK04-READ-P3-Q02 Considers whether past comments still describe the current service. _____

MOCK04-READ-P3-Q03 Judges the handling of a problem as evidence about the organisation. _____

MOCK04-READ-P3-Q05 Looks for recurring details rather than one emotionally powerful account. _____

MOCK04-READ-P3-Q06 Does not assume that a fair response must agree with every complaint. _____

MOCK04-READ-P3-Q07 Recognises that reading more comments may not remove a participation bias. _____

MOCK04-READ-P4 | WHEN A USEFUL MEASURE BECOMES A MISLEADING TARGET | 14 min

Match seven paragraphs to seven of the eight headings. Use each selected heading once; one is extra.

- | | |
|---|--|
| A. Visible improvement can conceal unfinished work | B. A target should remain open to revision |
| C. Why organisations should stop collecting information | D. The easiest cases become unusually attractive |
| E. Adding measures does not remove the need for judgement | F. Sampling restores some of the missing context |
| G. An indicator acquires a second job | H. Comparisons depend on the cases included |

1. A support team began recording how quickly it answered customer messages. At first, the figure helped managers identify busy periods and arrange staffing. Later, it became the principal target used to judge individual performance. The number itself had not changed, but its role had. What had been a description of activity now influenced how people behaved. Staff had a reason to reduce the measured interval even when doing so did not improve the customer's experience. This transition is easy to overlook because a familiar measure appears to retain its familiar meaning. In practice, the incentives attached to it can change the process it was intended to describe.

2. The team soon answered messages more rapidly. Some replies, however, merely confirmed that a request had been received and promised a fuller response later. Customers still waited for their problems to be resolved, sometimes through several exchanges. A chart of first-response times suggested improvement while saying little about completion. The initial reply was not useless: acknowledgement can reassure a customer. The error lay in treating one stage of the service as though it represented the whole. A measure can be accurate about what it counts and still support a misleading conclusion when readers assume that it captures more than it actually does.

3. Once speed affected individual evaluations, straightforward requests became more desirable than complicated ones. An employee could clear several simple questions in the time required to investigate a single difficult case. No explicit instruction told staff to avoid complexity, yet the target made that behaviour rational. Customers with unusual problems consequently risked receiving a slower service. This pattern did not require dishonesty or indifference. It arose from a mismatch between the organisation's broad purpose and the narrower activity it rewarded. Explaining the gap as a failure of employee motivation would therefore leave the underlying incentive unchanged and make the same outcome likely to recur.

4. Managers responded by tracking resolution time and customer satisfaction as well. The additional information was useful, but it introduced further questions. Some requests depended on outside suppliers, making rapid resolution impossible. Some customers were dissatisfied because the correct answer was not the answer they wanted. Combining several numbers into one score could conceal these distinctions rather than resolve them. A broader set of measures should support informed discussion about performance, not create the impression that every relevant consideration has

been captured mathematically. The task is to understand why the figures differ, including whether those differences are within the team's control.

5. One branch appeared consistently slower than another until managers examined the requests each handled. The slower branch received a larger share of complex account problems. Comparing their averages without acknowledging that difference made a demanding workload look like poor performance. Adjusting for case type improved the comparison, although categories themselves required care: a label such as 'complex' could become another way to influence results. Fair evaluation therefore needed both consistent definitions and occasional examination of actual cases. The relevant question was not merely whether two figures had been calculated in the same way, but whether the underlying work was sufficiently comparable for the comparison to be meaningful.

6. The organisation introduced regular reviews of a small selection of completed conversations. Reviewers examined whether staff understood the request, explained the outcome and avoided unnecessary exchanges. This took longer than reading a dashboard, but it revealed patterns that the dashboard could not show. The sample was selected systematically rather than consisting only of memorable complaints or exemplary successes. Its purpose was not to inspect every interaction. It was to test whether the numerical trends corresponded to the quality of work managers thought they represented. Where they did not, the discrepancy became a reason to investigate rather than an embarrassment to be hidden.

7. The team continued to monitor speed, but stopped treating the shortest response time as an achievement in isolation. Staff could explain exceptions, and managers reviewed whether the target was producing the intended behaviour. This approach did not make measurement unnecessary or remove accountability. It made the relationship between the measure and the purpose explicit. A useful indicator earns its place by helping people understand and improve a service; it should not be protected merely because it is easy to collect or has appeared in reports for years. When the indicator begins to distort the work, revising it is part of responsible management.

MOCK04 | LISTENING | 40 MIN

The helper reads recordings R01-R20 from the Answer Book. Stop at 40 minutes. Reading the transcript yourself is not a listening attempt.

MOCK04-LIST-P1 | LISTENING

Tasks 1-13: listen to each short recording and choose one answer. Maximum two plays each.

MOCK04-LIST-P1-Q01 Which detail should be checked on arrival?

A. The booking status B. The room number C. The start time

Answer: _____

MOCK04-LIST-P1-Q02 What could increase the estimate?

A. A booking charge B. Additional parts C. The stated labour

Answer: _____

MOCK04-LIST-P1-Q03 What did the session achieve?

A. Agreement on the evidence required B. A shorter meeting schedule C. A final decision

Answer: _____

MOCK04-LIST-P1-Q04 What happens after cancellation?

A. Access ends immediately B. Current paid access continues C. The last payment is returned

Answer: _____

MOCK04-LIST-P1-Q05 Why does the total appear higher?

A. A meal has been included B. A compulsory fee was added C. Admission costs more

Answer: _____

MOCK04-LIST-P1-Q06 Who is needed at the venue?

A. An assistant for the demonstration B. An equipment supplier C. A different speaker

Answer: _____

MOCK04-LIST-P1-Q07 Where are the exact figures?

A. In the summary B. In the appendix C. In the introductory chart

Answer: _____

MOCK04-LIST-P1-Q08 What does a deposit secure?

A. Immediate delivery B. A longer reservation C. A lower total price

Answer: _____

MOCK04-LIST-P1-Q09 What is unavailable in the afternoon?

A. The advanced activity B. Introductory instruction C. All practical work

Answer: _____

MOCK04-LIST-P1-Q10 What change do they agree is needed?

A. A different colour scheme B. Larger print throughout C. An explanation of the symbols

Answer: _____

MOCK04-LIST-P1-Q11 What is the customer advised to do?

A. Cancel the replacement B. Keep the original temporarily C. Return the original immediately

Answer: _____

MOCK04-LIST-P1-Q12 Whose views may be underrepresented?

A. Former visitors B. The survey organisers C. Recent visitors

Answer: _____

MOCK04-LIST-P1-Q13 Why is the finish estimate unchanged?

A. The group will start later B. The climb may offset the shorter distance C. The distance is unchanged

Answer: _____

MOCK04-LIST-P2 | LISTENING MATCHING

Task 14: four speakers on one topic. Match each to one statement A-F. Two statements are unused.

- A. changed an opinion after direct experience
- C. values an unexpected secondary benefit
- E. would continue only with clearer limits

- B. is concerned about unequal participation
- D. accepts uncertainty as part of the activity
- F. prefers expert decisions over group votes

MOCK04-LIST-P2-Q01 Speaker 1 _____

MOCK04-LIST-P2-Q02 Speaker 2 _____

MOCK04-LIST-P2-Q03 Speaker 3 _____

MOCK04-LIST-P2-Q04 Speaker 4 _____

MOCK04-LIST-P3 | LISTENING

Task 15: decide who expresses each opinion. A Man, B Woman, C Both.

MOCK04-LIST-P3-Q01 The options need information about future costs.

A. Man B. Woman C. Both

Answer: _____

MOCK04-LIST-P3-Q02 Low turnout might be ignored when interpreting a binding vote.

A. Man B. Woman C. Both

Answer: _____

MOCK04-LIST-P3-Q03 A large response does not necessarily represent the community.

A. Man B. Woman C. Both

Answer: _____

MOCK04-LIST-P3-Q04 Consultation needs a definite end point.

A. Man B. Woman C. Both

Answer: _____

MOCK04-LIST-P41 | LISTENING

Task 16: listen to the longer monologue and answer both questions. Attend to qualifications and implications.

MOCK04-LIST-P41-Q01 What prompted the speaker to reconsider the initial recommendation?

A. The overall increase concealed changes among the intended users B. The attendance figures had been calculated incorrectly C. The colleague proved the scheme had caused every departure

Answer: _____

MOCK04-LIST-P41-Q02 What principle does the speaker ultimately support?

A. Numerical evidence is inherently less useful than interviews B. Evaluation must remain capable of qualifying a preferred conclusion C. A pilot is successful only if every previous user remains

Answer: _____

MOCK04-LIST-P42 | LISTENING

Task 17: listen to the longer monologue and answer both questions. Attend to qualifications and implications.

MOCK04-LIST-P42-Q01 Why was publishing the full report insufficient?

A. Availability did not ensure that people understood the relevant choices B. People were forbidden to discuss the major issues C. The report contained no useful evidence

Answer: _____

MOCK04-LIST-P42-Q02 How does the speaker view the shorter explanation?

A. Automatically neutral because its language is clear B. A replacement for access to the full report C. Useful if its selection of information is checked critically

Answer: _____

MOCK04 | WRITING | 50 MIN

All four parts concern the same group. Use the stated word ranges; planning and checking are included in the 50 minutes.

MOCK04-WRITE-P1 | WRITING PART 1 | 3 min

You have joined a local sound archive project. Reply to each message in one to five words.

MOCK04-WRITE-P1-Q01 | 1-5 words

What name should identify your contribution?

MOCK04-WRITE-P1-Q02 | 1-5 words

Which local place would you record?

MOCK04-WRITE-P1-Q03 | 1-5 words

What recording device could you use?

MOCK04-WRITE-P1-Q04 | 1-5 words

At what time are you usually available?

MOCK04-WRITE-P1-Q05 | 1-5 words

Which language would you prefer for project messages?

MOCK04-WRITE-P2 | WRITING PART 2 | 7 min

You have joined a local sound archive project.

MOCK04-WRITE-P2-Q01 | 20-30 words

Explain what kind of local sound you would record and what it could reveal about the area.

MOCK04-WRITE-P3 | WRITING PART 3 | 10 min

You have joined a local sound archive project.

MOCK04-WRITE-P3-Q01 | 30-40 words

When can a sound recording convey something a photograph cannot?

MOCK04-WRITE-P3-Q02 | 30-40 words

How might recording an event change the way people behave?

MOCK04-WRITE-P3-Q03 | 30-40 words

Should an archive preserve everyday sounds even when their future value is uncertain?

MOCK04-WRITE-P4 | WRITING PART 4 | 30 min

You have joined a local sound archive project.

Announcement

The project will publish selected recordings online. The proposed form allows recordings to be edited for length, but it does not explain how contributors will review edits or how other identifiable speakers will be informed. The project wants comments before collecting new material.

MOCK04-WRITE-P4-Q01 | 40-50 words

Email a friend who is also a member. Share your reaction with a fellow contributor and suggest what to check before making a recording.

MOCK04-WRITE-P4-Q02 | 120-150 words

Email the organiser. Explain the benefit of public access, identify two practical information gaps, and recommend a workable review process without assuming that every edit is unacceptable.

MOCK04 | SPEAKING | 12 MIN

MOCK04-SPEAK | SPEAKING | 12 min

Use the full timed sequence. Parts 1-3: no preparation pause. Part 1: 30 seconds per response. Parts 2-3: 45 seconds per response. Part 4: 1 minute preparation and one 2-minute response covering all three questions.

MOCK04-SPEAK-Q01 | Part 1

1. What kinds of sounds do you notice where you live?
2. How do you preserve memories of important occasions?
3. Describe a place whose atmosphere you remember clearly.

MOCK04-SPEAK-Q02 | Part 2

Photo brief: A researcher wearing headphones is holding a microphone near a busy market stall. A vendor is speaking while other customers continue shopping.

1. Describe the photograph.
2. Tell me about a recording or photograph that helped you remember an event.
3. How can recording an experience influence the experience itself?

MOCK04-SPEAK-Q03 | Part 3

Photo A: A visitor is listening to an old recording through headphones in an archive.

Photo B: A group is watching a live street performance in a crowded square.

1. Compare the photographs.
2. What might be gained or lost when an event is experienced through a recording?
3. How should people decide which everyday experiences deserve preservation?

MOCK04-SPEAK-Q04 | Part 4

1. Tell me about a time your memory of an event differed from someone else's.
2. How did you respond to the difference?
3. Can a collection of accurate records still give a misleading impression of the past?
